

SPM 2: *Percent of women at risk of unintended pregnancies (as defined by Alan Guttmacher Institute) receiving family planning and related reproductive health services through publicly funded clinics.*

Annual Objective and Performance Data	Tracking Performance Measures (Sec 485 (2)(2)(B)(iii) and 486 (a)(2)(A)(iii))				
	2000	2001	2002	2003	2004
Annual Performance Objective	12.9	13.5	18.5	19.0	43.5
Annual Indicator	16.3	18.1	24.3	42.9	38.3
Numerator	48,297	53,542	71,856	98,678	88,143
Denominator	296,390	296,390	296,300	230,060	230,060
Is Data Provisional or Final				Final	Final
	2005	2006	2007	2008	2009
Annual Performance Objective	39.1	40.1	41.3	42.0	43.5

Notes - 2002

Sources: Numerator: Number of women receiving contraceptive services at GPR/Title V and Title X funded clinics. Denominator: Estimated number of Wisconsin women at risk of unintended pregnancy estimated by the Alan Guttmacher Institute (AGI). Data issues: Among the 1,199,350 women in Wisconsin ages 13-44, 625,000 are estimated to be at risk of unintended pregnancy and in need of contraceptive services and supplies. Of this number, 296,390 are estimated to be at risk of unintended pregnancy and in need of publicly supported contraceptive services: this includes 92,060 under age 20, and 204,330 between the ages of 20-44 and under 250% of poverty. The statewide denominator used to determine the percent of total estimated need in Wisconsin met through WI GPR/Title V funded services is 296,390. The basis for the projections for 2003-2008 objectives is implementation and continuation of the WI Medicaid waiver that expands eligibility for family planning services. We assume the Medicaid waiver, implemented January 1, 2003, will result in an increased number of women at risk of unintended pregnancy receiving services at publicly supported clinics; therefore, we revised our objectives accordingly.

Notes - 2003

Sources: Numerator: Number of women receiving contraceptive services at GPR/Title V and Title X funded clinics. Denominator: Estimated number of Wisconsin women at risk of unintended pregnancy estimated by the Alan Guttmacher Institute (AGI). Revised 2000 estimates of need. Data issues: Among the 1,235,190 women in Wisconsin ages 13-44, 634,250 are estimated to be at risk of unintended pregnancy and in need of contraceptive services and supplies. Of this number, 230,060 are estimated to be at risk of unintended pregnancy and in need of publicly supported contraceptive services: this includes 95,350 under age 20, and 134,710 between the ages of 20-44 and under 250% of poverty. The statewide denominator used to determine the percent of total estimated need in Wisconsin met through WI GPR/Title V funded services is 230,060. The basis for the projections for 2004-2008 objectives is implementation and continuation of the WI Medicaid waiver that expands eligibility for family planning services. We assume the Medicaid waiver, implemented January 1, 2003, will result in an increased number of women at risk of unintended pregnancy receiving services at publicly supported clinics; therefore, we revised our objectives accordingly. Please note the following changes in 2003: 1) AGI released revised estimates of need for 2000, and the statewide denominator changed from 296,390 to 230,060; 2) an increased number of women received services in 2003 compared to 2002; and 3) the methodology for counting patients was changed in 2003 – from contraceptive

patients receiving a physical examination to any patient receiving contraceptive management services as defined by a V25 ICD-9 code. The change in the denominator alone resulted in an increased percentage from 33.3% (98,678/296,390) to 42.9% (98,678/230,060).

Notes - 2004

Sources: Numerator: Number of women receiving contraceptive services at GPR/Title V and Title X funded clinics. Denominator: Estimated number of Wisconsin women at risk of unintended pregnancy estimated by the Alan Guttmacher Institute (AGI). Revised 2003 estimates of need. Data issues: Among the 1,235,190 women in Wisconsin ages 13-44, 634,250 are estimated to be at risk of unintended pregnancy and in need of contraceptive services and supplies. Of this number, 230,060 are estimated to be at risk of unintended pregnancy and in need of publicly supported contraceptive services: this includes 95,350 under age 20, and 134,710 between the ages of 20-44 and under 250% of poverty. The statewide denominator used to determine the percent of total estimated need in Wisconsin met through WI GPR/Title V funded services is 230,060. The basis for the projections for 2005-2009 objectives is implementation and continuation of the Wisconsin Medicaid family planning waiver that expands eligibility for family planning services. We assume the Medicaid waiver, implemented January 1, 2003, will result in an increased number of women at risk of unintended pregnancy receiving services at publicly supported clinics; therefore, we revised our objectives accordingly. Please note the following changes in 2004: changes in protocols to make contraceptive supplies more convenient resulted in a slight decrease in the number of patients returning to clinics within the year, and therefore, receiving a clinic visit counted for the numerator. Increased participation is anticipated in the Waiver is reflected in the objectives.

a. Last Year's Accomplishments

Relationship to Priority Need(s): SPM #2 relates to Wisconsin's Priority Need #2 - Health Access and #7 - Teen Pregnancy.

Access and availability to family planning services and related reproductive health care contributes to the prevention of unintended pregnancy, and improves access to basic routine primary and preventive health care for low income and uninsured women. Access to private and confidential contraceptive services, which can be assured through publicly supported-services, is essential for providing effective contraceptive services to sexually active adolescents. This is a cornerstone of Wisconsin's strategy to prevent adolescent pregnancy. Reproductive health care that routinely accompanies contraceptive services addresses basic health issues that are an important part of women's routine and preventive health care.

1. Contraception and Related Reproductive Health Care--Direct Health Care Services--Women and sexually active adolescents

Title V Block Grant and matching State Funds supported the following services to women:

- * 31,779 women received comprehensive family planning services;
- * 18,381 women received pregnancy testing services and appropriate continuity of care (contraceptive services or pregnancy-related services),
- * over 40,000 women received screening for chlamydia as part of infertility prevention services,
- * 44,415 women received cervical cancer screening services.

2. Implementation of Wisconsin's Medicaid Family Planning Waiver Program--Enabling Services--Women and sexually active adolescents

The purpose of many activities in 2004 was the continued implementation of Wisconsin's Medicaid Family Planning Waiver (FPW). The FPW expanded Medicaid eligibility to women ages 15-44 with incomes below 185% of poverty. Successful implementation of the FPW will expand family planning access to 50,000 additional women in Wisconsin. As of December 31, 2004, 55,515 women were enrolled under this program.

A Social Marketing/Quality Improvement project continued to determine how population segments currently not using contraceptive services could be reached to provide them information needed for making an informed choice about participation in the FPW. Another purpose was to determine what changes needed to be made in clinic services to make services more acceptable to newly eligible women to receive services. These activities will continue in 2005.

3. Family Planning Provider Training--Infrastructure Building Services--Women and sexually active adolescents

Provider training sessions were continued to improve knowledge and skill levels in several key areas including CPT/ICD-9 coding, cost accounting, HIPAA privacy responsibilities, and presumptive eligibility procedures (used for initial enrollment into the FPW). Technical assistance and support to family planning providers was facilitated through a List-Serve and web-site supported by Health Care Education and Training, with which DPH/MCH contracts.

Figure 4b, State Performance Measures from the Annual Report Year Summary Sheet

Activities	Pyramid Level of Service			
	DHC	ES	PBS	IB
1. Contraception and related reproductive health care	X			
2. Implementation of Wisconsin's Medicaid Family Planning Waiver Program		X		
3. Family planning provider training				X

b. Current Activities

1. Contraception and Related Reproductive Health Care--Direct Health Care Services--Women and sexually active adolescents

Expansion of family planning (contraception and related reproductive health care) services is anticipated during 2005 as a result of the Medicaid Family Planning Waiver. Twelve thousand additional women will likely receive services in 2005 above 2004 service. In 2005, the Department of Health and Family Service's Family Planning and Reproductive Health Care Council continues to meet regularly. The Family Planning Council's role is to advise the Secretary and foster internal Departmental coordination to insure access to cost effective family planning services and reproductive health care. The goals include: to provide access to affordable reproductive health care (especially to low-income women), prevent unintended pregnancy, and deliver cost effective services. The Wisconsin Lt. Governor actively participates in the Family Planning Council. Family planning services are considered to be an integral component of women's health care.

Family planning will also be included in DHFS efforts to decrease disparities among women of color with respect to low birth weight -- integrating family planning with other interventions to reduce the incidence of low birth weight.

2. Promotion and Outreach for Wisconsin's Family Planning Waiver Program--Enabling Services--Women and sexually active adolescents

Title V Program staff are actively involved with the Medicaid Program in implementing the Family Planning Waiver.

3. Family Planning Provider Training--Infrastructure Building Services--Women and sexually active adolescents

Technical assistance and support, and continuing education activities identified above will continue in 2005. Planning for provider training in clinic quality improvement issues, resulting from the social marketing research, will continue.

c. Plan for the Coming Year

This performance has been changed to reflect the new 5-year Title V Needs Assessment.
